## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-16, 25 and 26 are rejected under 35 U.S.C. 102(e) as being anticipated by Biagtan et al. (US 6,451,026 B1) or Gosiengfiao et al. (US 6,612,998 B2).

Biagtan teaches in Figs. 1-22 and cols. 4-10 or Gosiengfiao teaches in Figs. 1-7 and cols. 4-6, a method or system for performing an intracorporeal procedure within a patient comprising the steps or structures providing a guide wire/intracorporeal device that is MRI compatible wherein the guide wire includes an elongated core with a non-conductive proximal core section, an essentially non-magnetic distal core section, and an MRI visible magnetic marker on the distal core section; introducing the guide wire into a body lumen of the patient; advancing the intracorporeal device under MRI observation; performing therapeutic or diagnostic procedure.

Art Unit: 3737

The specific limitations of the dependent claims concerning the structures and constructing materials of the intracorporeal/guide wire device are inherently taught by the disclosures of Biagtan or Gosiengfiao in order to provide a MRI compatible guide wire/intracorporeal device.

*Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 17-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Biagtan et al. (US 6,451,026 B1) in view of Wang et al. (US 5,951,494) or Gosiengfiao et al. (US 6,612,998 B2) in view of Wang et al. (US 5,951,494).

Biagtan or Gosiengfiao teaches all the limitations of the claimed subject matter except for mentioning specifically a torque transmitting junction.

Wang teaches a torque transmitting junction (col. 16, lines 11). Wang further teaches that the torque transmitting junction is used for reducing the metal interference in MRI procedure (col. 16, lines 20-22).

Therefore, it would have been obvious to an ordinary skill in the art, at the time the invention was made to use the torque transmitting junction of Wang in either Biagtan's or Gosiengfiao's intracorporeal device in order to reduce metal interference during MRI procedure.
